SUMMARY

Systems Administrator / DevOps Engineer with hands-on experience in Linux administration, cloud computing, and DevOps technologies including Docker, Kubernetes, AWS, Ansible, Jenkins, and Git. Experienced supporting production environments, monitoring system performance, troubleshooting infrastructure and application issues, and automating routine tasks using Shell scripting and Python (Boto3). Proficient in managing containerized applications, Kubernetes environments, and cloud infrastructure while ensuring high availability, reliability, and operational efficiency.

TECHNICAL SKILLS

Operating Systems: Linux
Cloud Platform: AWS (EC2, S3, IAM, VPC, ALB, Auto Scaling, CloudWatch)
Containerization & Orchestration: Docker, Kubernetes (kubeadm, K3s), kubectl
Configuration Management: Ansible
CI/CD: Jenkins
Version Control: Git, GitHub
Monitoring & Observability: Prometheus, Grafana
Programming & Scripting: Shell Scripting, Python (Boto3), Golang
Web Server: Nginx
Networking: TCP/IP, DNS, HTTP, HTTPS, Load Balancing

PROFESSIONAL EXPERIENCE

Nupeak IT Services Pvt. Ltd. **Ahmedabad**
DevOps & System Administrator | Fraud Management & Fraud Decisioning *Dec 2025 - Present*

- Managed and maintained Linux servers hosting Fraud Management and Fraud Decisioning applications across 13 global regions, ensuring high availability, system stability, and reliable production operations.
- Monitored Linux servers, Kubernetes workloads, and application health, including CPU, memory, disk utilization, and service status, to maintain operational efficiency.
- Troubleshot Linux servers, Kubernetes environments, and application issues by analysing logs, identifying root causes, and implementing corrective actions to minimize downtime.
- Developed and maintained Shell scripts to automate server maintenance, health checks, monitoring, and routine operational tasks.
- Supported application deployment activities, log analysis, service management, and environment validation across multiple environments.
- Collaborated with DevOps, infrastructure, and application teams to resolve production incidents, perform root cause analysis (RCA), and provide operational support across multiple environments.

Improwised Technologies Pvt. Ltd. **Rajkot**
DevOps Intern *Jan 2025 - Apr 2025*

- Implemented Docker for managing multiple microservices, creating consistent development and deployment environments and improving application reliability.
- Configured and maintained Linux servers with regular updates, security monitoring, performance optimization, and system maintenance to ensure stable operations.
- Managed Git/GitHub repositories for the development team using effective branching and version control strategies to improve collaboration and reduce merge conflicts.
- Developed and maintained Golang applications following coding best practices, improving code quality, application performance, and maintainability.
- Performed troubleshooting and debugging for server, application, and deployment-related issues while supporting smooth software delivery and operations.

PROJECTS

Highly Available VPC Architecture with Auto Scaling & Load Balancer
Technologies: AWS, EC2, VPC, Auto Scaling Groups, Application Load Balancer, NAT Gateway, Security Groups

- Designed and implemented a highly available multi-AZ VPC architecture using public and private subnets.
- Configured Auto Scaling Groups and an Application Load Balancer to ensure scalability and fault tolerance.
- Implemented secure networking using Route Tables, Security Groups, Internet Gateway, and NAT Gateway.
- Built a production-ready AWS infrastructure with high availability and secure outbound connectivity.

Serverless Web Application on AWS
Technologies: AWS Lambda, API Gateway, DynamoDB, S3, IAM, CloudWatch

- Developed a serverless web application using AWS Lambda, API Gateway, and DynamoDB.
- Designed RESTful APIs to process client requests with scalable serverless compute.
- Configured IAM roles, S3, and CloudWatch for secure access, storage, and monitoring.
- Built a scalable, low-maintenance architecture using fully managed AWS services.

Cloud-Native DevOps Portfolio Deployment on Kubernetes (kubestarter)
Technologies: Kubernetes (kubeadm), Docker, Nginx, Git, GitHub, Vagrant, React.js, Node.js, Express.js

- Developed and deployed a containerized full-stack portfolio application on a kubeadm-based Kubernetes cluster.
- Managed Kubernetes Deployments, Services, Namespaces, and NodePort for multi-tier application deployment.
- Configured Nginx as a reverse proxy and published Docker images to Docker Hub for deployment.
- Managed the complete deployment lifecycle using Git, Docker, and Kubernetes in a multi-node Vagrant environment.

EDUCATION & CERTIFICATIONS

DevOps Training Program - GRRAS IT Solutions, Ahmedabad 2025 - 2026
B.Tech, Computer Engineering - Atmiya University, Rajkot 2021 - 2025
